

Go to: <http://wp.netscape.com/computing/download/index.html?cp=brictrpr2>

Click on the BIG download button. A small dialog box will come up and ask you a question about saving the file.

1. Click on Save. You will then be asked where to save it to. Save it to you desktop.
2. Click on Save.
3. When the download is finished, click on the Close button.
4. Now, go to your desktop and double click on the NSSetup.exe file.
5. Click Next
6. Click Accept
7. Select Full. Keep the default location. Click Next.
8. Click Next.
9. Click Next.
10. Click Install.
11. Netscape files will now be downloaded. It may take some time on your dialup line. It may be best to start this in the evening before you go home. It is just over 26M of data.
12. When that is downloaded, the install will start automatically. Let it run. It will Configure Sun Java 2 as well as RealPlayer 8 and Winamp.
13. An Activation window will pop up. Hit Cancel. That is just for setting up other Netscape items. We
14. don't need it here.
15. Your new Netscape browser will come up.
16. Click on Tasks->Mail & NewsGroups. This will bring up the email window.
17. Click on File->New->Account. This will bring up the New Account Setup Wizard. ISP or email provider is selected.
18. Click on Next.
19. In the text box for "Your Name:" type your name
20. In the text box for "Email Address:" type your email address
21. Click on Next.
22. POP is selected. In the text box for "Server Name" type mail.<your domain name>.com.
23. In the text box for "Outgoing Server Name:" type mail.<your domain name>.com.
24. Click on Next.
25. In the text box for "User Name:" type your email account user name.
26. Click on Next.
27. In the text box for "Account Name:" type your name
28. Click on Next.
29. Click on Finish.

Now, you should get email in your <Your name> folder.

You will need to do the same steps to setup all your other accounts.

Test it out by sending yourself email. If it doesn't work it usually has to do with the password you used. For a last resort, call me 855-2884.
